

Internal cable routing

The THM ULNA is ready for internal cable routing. There are two $\varnothing 8$ mm holes in the bow of the handlebar. For Shimano Di2 please use the junction in the end of the hoods and a Y-cable to realize an internal cable routing.

The part numbers are the following (when writing this manual):

- Shimano E-TUBE Junction A Built In Type,
MODEL NO: EW-RS910
- Shimano Y-connector Cable,
MODEL NO: EW-JC130 (depending on the handlebar width)
